-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 2/15/08.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/15/08 has been entered.

### ***Rejections Withdrawn***

2. The 35 U.S.C. 102(b) rejection of claim 1 anticipated by Osawa has been withdrawn due to applicant's cancellation of claim 1 in amendment filed on 2/15/08.
3. The 35 U.S.C. 103(a) rejection of claim 3 unpatentable over Osawa in view of Sakamoto et al. has been withdrawn due to applicant's amendment filed on 2/15/08.

### ***New Rejection***

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Osawa in view of Ogasawara et al. (20010008729).

Osawa discloses a nickel metal hydride storage battery comprising a positive electrode comprising nickel hydroxide as a active material (paragraph 0022), a negative electrode comprising a hydrogen absorbing alloy containing aluminum as a component of the alloy (paragraph 0006), a separator and an alkaline electrolyte (paragraph 0022), wherein an aromatic carboxylic acid which forms a complex with aluminum ions is included in the negative electrode (paragraph 0012).

Osawa fail to disclose a layer comprising hydroxide or oxide of an element selected from the group consisting of calcium, strontium scandium, yttrium, lanthanoids and bismuth is formed on a surface of the positive active material and is in direct contact with the nickel hydroxide active material.

Ogasawarn et al. teaches a layer comprising yttrium oxide that is formed on a surface of the positive active material and is in direct contact with the nickel hydroxide active material (paragraph 0014) for the purpose of improving the conductivity of the positive electrode thereby obtaining a high discharge capacity in the alkaline storage battery (paragraph 0013).

Therefore, it would have been obvious to one having ordinary skill in the art at the time applicant's invention was made to provide Osawa with a layer comprising yttrium oxide that is formed on a surface of the positive active and is in direct contact with the nickel hydroxide active material in order to improve the conductivity of the positive electrode thereby obtaining a high discharge capacity in the alkaline storage battery (paragraph 0013) as taught by Ogasawarn et al.

***Response to Arguments***

5. Applicant's arguments with respect to claim 3 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***
